

SellSell / PickPic — RunPod Ollama Developer Guide

This document contains the production AI infrastructure details for the SellSell / PickPic marketplace platform. It is intended for developers integrating with the RunPod-hosted Ollama inference server used for: Chat completion Vision analysis Semantic embeddings AI-powered marketplace search Listing enrichment and moderation

Component	Value
RunPod Pod ID	4yp13edfjl4agz
Public Ollama API URL	https://4yp13edfjl4agz-11434.proxy.runpod.net
Internal Ollama URL	http://localhost:11434
Embedding Model	nomic-embed-text:latest
Chat Model	qwen2.5:14b-instruct-q8_0
Vision Model	llava:latest
Additional Models	qwen-coder:latest, deepseek-coder:6.7b

Production Environment Variables

```
OLLAMA_BASE_URL=https://4yp13edfjl4agz-11434.proxy.runpod.net
OLLAMA_API_KEY=lumenpath-monetchat-key-2026
OLLAMA_CHAT_MODEL=qwen2.5:14b-instruct-q8_0
OLLAMA_VISION_MODEL=llava:latest
OLLAMA_EMBED_MODEL=nomic-embed-text:latest
```

API Verification Commands

```
curl https://4yp13edfjl4agz-11434.proxy.runpod.net/api/tags -H "Authorization: Bearer lumenpath-monetchat-key-2026"
curl https://4yp13edfjl4agz-11434.proxy.runpod.net/api/generate -H "Authorization: Bearer lumenpath-monetchat-key-2026"
curl https://4yp13edfjl4agz-11434.proxy.runpod.net/api/embeddings -H "Authorization: Bearer lumenpath-monetchat-key-2026"
```

Marketplace AI Workflow

User uploads a product listing. Vision AI analyzes uploaded images using Llava. System generates semantic AI description. Embeddings are generated using nomic-embed-text. Vectors are stored in Qdrant. Buyer searches using natural language. Search first prioritizes seller description. Then semantic Qdrant search enriches and broadens results. AI ranking layer returns the most relevant listings.

High-Level Architecture

Important Notes

All semantic search relies on Qdrant vector indexing. Every listing should eventually receive AI enrichment in the background. Search logic combines: Seller title Seller description AI-generated description Semantic vector similarity The system is Arabic-first but supports multilingual search. Vision analysis is performed asynchronously for scalability.
