

Sell-Sell.com

AI Listing Tutorial — Deployment & Feature Documentation

<https://sell-sell.com/tutorial.html>

Overview

This document describes the shareable AI Seller Tutorial page built and deployed for Sell-Sell.com. The tutorial guides users through the AI-powered chat listing workflow and is served as a fully self-contained HTML file at the URL above.

Tutorial Page Content

Hero Section

The hero section contains:

- Large headline communicating the AI listing value proposition
- Primary CTA button linking to /chat
- AI mockup screenshot illustrating the chat interface

6-Step Listing Process

The tutorial walks users through the following steps:

1. Open the chat
2. Say what you want to sell
3. Upload a photo
4. Review the AI-filled form
5. Set location and contact details
6. Publish the listing

Features Grid

Six feature highlights are presented in a grid layout:

Feature	Description
AI-Powered	Automatically fills listing details from a photo or description
GPS Detection	Auto-detects and fills user location
Arabic / English	Fully bilingual interface
60-Second Listing	Complete a listing in under one minute
Quality Hints	AI suggests improvements to title, price, and description

QR Codes	Each listing includes a shareable QR code
----------	---

FAQ Section

Six frequently asked questions are answered in an accordion-style layout:

- How does the AI know what I am selling?
- Do I need an account to list?
- What languages are supported?
- How long does a listing take?
- Can I edit my listing after publishing?
- How do I share my listing?

Footer

The footer includes navigation links to Home, Chat, and Explore.

Technical Specifications

Property	Value
File Type	Fully self-contained HTML (no external dependencies)
Works Offline	Yes
Dark Mode	Yes
Mobile Responsive	Yes
Animated Transitions	Scroll-in CSS animations
Login Required	No
Hosting	Nginx / Caddy static file served at /opt/sellstatic
Live URL	https://sell-sell.com/tutorial.html
HTTP Status	200 OK (HTTPS)

Deployment Process

The tutorial page was deployed using the following steps:

7. Tutorial HTML and mockup PNG were added to the /public directory and committed to the Git repository.
8. Files were pushed to the production server at 68.183.97.126 via SSH and git pull.

9. Because Next.js standalone embeds /public at build time (not at runtime), the static files were copied directly to /opt/sellsell-static on the host.
10. The Caddy reverse proxy configuration was updated to serve /tutorial.html and /tutorial-chat-mockup.png directly from /opt/sellsell-static, bypassing the Next.js container.
11. All other traffic continues to be proxied to the Next.js container on port 3001.
12. Caddy was reloaded and both endpoints were verified to return HTTP 200.

Sharing the Tutorial

Use the message template below when sharing with testers:

 **Tutorial for Sell-Sell.com AI Listing:**

<https://sell-sell.com/tutorial.html>

Shows exactly how to list an item using the AI chat. Works on mobile. Let me know if anything is unclear!
