SellSell Marketplace Updates

Update: 30 May 2026

Prepared By: Shaz Ej

Executive Summary

This update focuses on marketplace intelligence, production quality assurance, seller experience improvements, multilingual search accuracy, QR/Product Code infrastructure, and production stabilization.

The platform has transitioned from a traditional classified marketplace toward an AI-powered conversational marketplace with intelligent search, semantic understanding, and automated listing assistance.

1. AI-Assisted Seller Flow

Production Deployment

The AI-assisted seller flow is now deployed and available on:

<https://sell-sell.com/chat>

Features Delivered

- AI-assisted listing creation
- Image upload support
- AI title suggestions
- AI attribute extraction foundation
- Unified contact information field
- Mobile-optimized seller experience
- Sticky publish button
- Listing quality recommendations
- Auto-location detection support

UX Improvements

Removed duplicate phone number collection.

Seller now provides only:

- Contact Information
- Location
- Price

- Description
- Images

This significantly simplifies the listing process.

2. Search Intelligence Improvements

Vehicle Search Accuracy

Major improvements deployed for:

Mercedes S400 Search

Query:

"أبي مرسيدس اس 400"

Previous behavior:

- Returned Audi
- Returned Porsche
- Returned Jeep
- Returned ML400
- Returned unrelated vehicles

Current behavior:

1. Exact Mercedes S400
2. Relevant S-Class fallback
3. No unrelated brands

Production verified.

Service Intent Search Lock

Major fix for Arabic service searches.

Example:

Query:

"أبي كهربائي"

Previous behavior:

- Returned vehicles
- Returned plumbers

- Returned unrelated categories

Current behavior:

- Returns only service listings
- Strict service category locking
- Empty state shown if no electrician exists

Production verified.

3. QR Code & Product Code System

Infrastructure deployed.

Every listing now receives:

- Product Serial ID
- Product Code
- QR Code

Example format:

SSC-KW-VEH-000001

Benefits:

- Faster customer support
- Direct listing lookup
- QR-based sharing
- Future analytics support
- Better search precision

Database migration completed successfully.

4. Image Infrastructure Fixes

Resolved marketplace image failures.

Previous issue:

- Broken image placeholders
- "Image Unavailable"
- Next.js SVG optimizer failures

Fixes:

- PNG fallback system
- URL normalization
- Legacy image support
- Cleaner placeholder rendering

Production verified.

5. Production QA Results

Marketplace Search

PASS

Verified:

- Mercedes S400
- Land Cruiser
- Prado
- Arabic vehicle searches
- English vehicle searches
- Service searches

Authentication

PASS

Verified:

- Registration
- Login
- Session persistence
- Seller onboarding

QR Pages

PASS

Verified:

- Product QR generation
- QR label pages
- Public QR rendering

6. Remaining High Priority Issues

Issue 1

Service Worker intercepts API requests.

Impact:

- "Failed to fetch"
- Session check failures

Priority:

HIGH

Issue 2

Text-only seller AI flow.

Current behavior:

User types:

"I want to sell my Toyota Camry 2021 for 4500 KWD"

Draft card appears but:

- Title missing
- Price missing
- Condition defaults incorrectly

Priority:

HIGH

Issue 3

RunPod Vision AI Integration

Current status:

Needs production verification and reconnection.

Goal:

Enable:

- Brand detection
- Model detection
- Color detection
- Year estimation

from uploaded images.

Priority:

HIGH

Issue 4

Language Hydration Shift

Current behavior:

LTR → RTL visual shift after page load.

Priority:

MEDIUM

7. Current Platform Status

Infrastructure:

- Production Stable
- Docker Healthy
- PostgreSQL Healthy
- Qdrant Healthy
- Redis Healthy

Marketplace:

- Operational

Seller Flow:

- Operational

Search Engine:

- Operational

QR System:

- Operational

AI Vision:

- Pending Final Verification

Next Development Phase

AI Conversational Marketplace Intelligence

Focus Areas:

1. Text-only AI listing extraction
2. RunPod Vision AI restoration
3. Automatic vehicle attribute extraction
4. Semantic image search
5. Location intelligence
6. Trust & fraud detection
7. Conversational shopping assistant

The platform is now evolving from a classified marketplace into an AI-powered marketplace ecosystem.
