

Today's Activity Report (March 16, 2026)

 SSE Stream Bug Fix (carries over from yesterday)

Conversation: *Fixing SSE Stream Bug* (started March 15, active until ~00:37 UTC today)

- Work continued from yesterday to fix the **Server-Sent Events (SSE) stream** in `src/app/api/chat/route.ts`
- The issue: the client was getting stuck on "**Thinking...**" after sending a message (e.g., "hi")
- Goal was to restore the correct status → delta → done event flow and ensure the stream closes properly

 SSE Stream Hang Fix

Conversation: *Fixing SSE Stream Hang* (started ~00:45 UTC, last active ~01:57 UTC)

- A follow-up bug emerged: the SSE stream was **hanging after sending a "Thinking..." status**
- Diagnosed and fixed `src/app/api/chat/route.ts`
- Involved **rebuilding the application container** and testing the chat endpoint

 Active Server Work (Right Now)

You have **4 active terminal sessions** all connecting to `administrator@38.247.138.151` (your Windows Server):

- One SSH session open for ~1h12m
- One running a **WSL Ubuntu command** (~58m)
- One running a **Docker build + compose** command in `/mnt/c/inetpub/monetchat` (~51m)
- One more WSL session (~48m)

This suggests a **Docker rebuild and redeploy is currently in progress** on the server, likely as part of applying the SSE fixes.

 Files Currently Open

- `route.ts` (chat API — main area of today's work)
- `route.ts` (health endpoint)
- `route.ts` (admin: users, analytics, products)
- `automate_gh_login.exp` (likely used for automated GitHub auth on the server)

TL;DR: Today has been focused entirely on debugging and fixing the SSE streaming bug in the Monetchat chat API, with an active Docker redeploy currently underway on the server.
