

Ollama Model Setup Walkthrough

The required models for vision and embeddings have been manually installed on the RunPod instance via SSH.

Changes Made

Manually pulled the `llava` model for vision capabilities.

Manually pulled the `nomie-embed-text` model for embeddings.

Verification Results

Pre-Installation State

text

NAME	ID	SIZE	MODIFIED
qwen2.5:14b-instruct-q8_0	985c5f25dfe9	15 GB	About an hour ago

Post-Installation State

text

NAME	ID	SIZE	MODIFIED
nomie-embed-text:latest	0a109f422b47	274 MB	9 seconds ago
llava:latest	8dd30f6b0cb1	4.7 GB	24 seconds ago
qwen2.5:14b-instruct-q8_0	985c5f25dfe9	15 GB	About an hour ago

API Verification (`/api/tags`)

The API returned a valid JSON response containing all three models:

json

```
{
  "models": [
    {
      "name": "nomie-embed-text:latest",
      ...
    },
    {
      "name": "llava:latest",
      ...
    },
    {
      "name": "qwen2.5:14b-instruct-q8_0",
      ...
    }
  ]
}
```

Both models were successfully installed without errors, and the Ollama API is responding correctly.
