

sellsell marketplace updates - 09052026

UPDATE: 09/05/2026:03:05AM

SHAZ EJ

Reading AGENTS.md first, then running the audit.

Now I have all the information needed. Here is the complete audit report.

Audit Report — Marketplace Frontend Discovery

1. Repo Identity

Item	Value
Working directory	/Users/shazej/Documents/askar/sellsell/pickpick-sls1/.claude/worktrees/unruffled-haibt-4ebb05
Current branch	claude/unruffled-haibt-4ebb05 (worktree off main)
Uncommitted changes	None — working tree is clean
Remote	git@github.com:shazej/pickpick-sls1.git

2. All Branches — Marketplace-Relevant Candidates

Branch	Has marketplace frontend?	Notes
origin/feature/product-page	✅ Best	Explore, category, product detail, listing card, buyer messaging, API-driven categories
origin/feat/marketplace-core-final	✅	Missing /explore route; older category/product pages
origin/feat/marketplace-core-delivery	✅	Identical file list to marketplace-core-final
origin/marketplace-delivery-clean	✅	Same as above
origin/feature/sellsell-marketing-site	⚠️	Has marketplace files but appears to predate the explore/product improvements
All others	❌	No marketplace-specific routes found

3. Current Branch (marketplace) Route Group

The current branch **already has a full marketplace frontend** at `src/app/(marketplace)/:`

```
src/app/(marketplace)/  
├─ explore/  
│  └─ layout.tsx
```

```
|   └─ page.tsx           ← 541 lines; DB-driven category chips, search,
filters, pagination
├─ category/[slug]/
│   └─ page.tsx
│   └─ client.tsx
├─ product/[productName]/
│   └─ page.tsx
│   └─ client.tsx
├─ p/[productId]/
│   └─ page.tsx
├─ search/page.tsx
├─ sellers/page.tsx
├─ seller/dashboard/      ← nested seller dashboard
├─ app-shell.tsx
├─ chat-page.tsx
├─ layout.tsx
└─ not-found.tsx
```

The explore page at /explore is a **complete, database-backed browse UI**: category filter chips (loaded from /api/categories/tree), keyword search, sort and condition filters, paginated listing grid, and a "load more" button.

4. Current Root Landing Page

```
/ → src/app/page.tsx → src/app/sellsell/page.tsx →
src/components/marketing/sellsell-landing.tsx
```

The hero section has exactly **two CTAs**:

- Primary button → router.push("/chat") — AI Search
- Secondary link → #how-it-works — anchors down the page

No **"Browse Marketplace" / "Explore" button exists**. That is the gap to fill.

5. Differences: Current Branch vs feature/product-page

Files that differ (feature/product-page has improvements or additions):

File	Delta	Risk
src/app/(marketplace)/explore/page.tsx	Categories replaced from hardcoded array → live API (/api/categories/tree)	Low
src/app/(marketplace)/category/[slug]/client.tsx	Full rewrite (60 → 290 lines); real DB query, pagination	Medium

File	Delta	Risk
src/app/(marketplace)/p/[productId]/page.tsx	Updated product detail page	Low
src/app/(marketplace)/category/[slug]/loading.tsx	New loading skeleton	Low
src/app/(marketplace)/p/[productId]/loading.tsx	New loading skeleton	Low
src/components/marketplace/listing-card.tsx	New reusable card component	Low
src/components/product/message-seller-button.tsx	Buyer-to-seller messaging button	Medium
src/components/product/product-attributes.tsx	Enhanced attributes display	Low
src/components/product/related-products.tsx	New related products widget	Low
src/components/product/save-listing-button.tsx	New save/bookmark button	Low
src/components/messaging/chat-window.tsx	New buyer↔seller chat window	Medium
src/components/messaging/thread-list.tsx	New thread list panel	Medium
src/services/message-service.ts	New messaging service	Medium
prisma/schema.prisma	Adds Conversation + ConversationMessage models	DESTRUCTIVE
prisma/migrations/20260504000000_add_conversations/migration.sql	New DB migration	DESTRUCTIVE
src/app/api/conversations/*	New API routes for messaging	Risky

6. Key Findings

Best marketplace frontend candidate: origin/feature/product-page

Route it uses: /explore (already present on current branch), /category/[slug], /product/[productName], /p/[productId]

Conflict with current seller/chat/auth work:

- The explore/category/product improvements are **safe** — they don't touch seller auth, the chat pipeline, or the existing seller dashboard.
- The **messaging system** (buyer↔seller conversations) touches src/app/(account)/messages/, src/components/messaging/, and adds new API

routes. This is a new feature, not a conflict, but it requires a DB migration before it can work.

- The **Prisma schema** is the only hard dependency — `feature/product-page` adds 2 new models. If those are cherry-picked without the migration, the messaging routes would fail at runtime, but the `explore/product` pages would work fine.

Files needed for the landing page button task only:

- **Zero files to copy.** The `/explore` route already exists on the current branch. Only `src/components/marketing/sell-sell-landing.tsx` needs a new `<Link href="/explore">` button added to the hero section.

7. Risk Level & Recommended Next Steps

Risk level for the landing page button: **SAFE**

Recommended next steps (in order):

1. **Immediate (no branch switching needed):** Add a "Browse Marketplace" / "استكشف" `<Link href="/explore">` button to the hero section of `src/components/marketing/sell-sell-landing.tsx` alongside the existing `/chat` CTA. The route already exists on this branch.
2. **Optional (cherry-pick improvements, low risk):** The `explore` page on `feature/product-page` upgrades category chips from a hardcoded static array to live API data. This is a self-contained improvement that can be cherry-picked without touching the schema.
3. **Separate task (medium risk, requires DB migration):** The buyer↔seller messaging system on `feature/product-page` is the most complete new feature. It requires the `Prisma Conversation` migration before enabling. Do not merge wholesale — isolate that migration and run it deliberately.
4. **Do not merge `feature/product-page` wholesale** until the `Conversation` schema migration is reviewed and explicitly approved, per `AGENTS.md` rules (DESTRUCTIVE classification).
