

sellsell marketplace updates:

SHAZ EJ

Based on the latest development reports you uploaded, here is the current project status as of **20 June 2026**:

Completed and Verified

- ✓ Silent logout issue fixed and deployed
- ✓ Explore page recommendations fixed and deployed
- ✓ Admin dashboard crash fixed and deployed
- ✓ Production deployment completed
- ✓ End-to-end browser verification completed successfully
- ✓ Admin Dashboard enhancements completed:

- Listing Moderation Panel
 - Moderation status
 - Indexing status
 - Last agent action
 - Approve / Reject actions
 - Retry moderation
 - Retry indexing
- Demand Capture Dashboard
 - Most requested products
 - Waiting buyers count
 - Categories
 - Price ranges
 - Matched / unmatched status
- Search Analytics
 - Top searches
 - Zero-result searches
 - Arabic vs English searches
 - Category demand
 - Contact click analytics
- User Analytics
 - Total users
 - Active users
 - Sellers
 - Buyers
 - Admins
 - Recent registrations
- UI/UX improvements
 - Loading states
 - Empty states
 - Responsive layouts
 - Summary cards

The reports indicate successful deployment and production verification with a stable environment and all major dashboard features operational.

Estimated Project Status

Core Marketplace Platform: **100%**

AI Search: **100%**

AI Seller Assistant: **100%**

Demand Capture: **100%**

Recommendations: **100%**

Infrastructure: **100%**

Admin Dashboard: **95-100%**

Mobile App: **~70%**

Notifications: **~80%**

Overall Project: **~97% Complete**

What Should Be Done Next

Step 1 — Notification System

Complete:

- Email notifications
- Push notifications
- Buyer alerts from Demand Capture
- Seller alerts for inquiries

Estimated: 1–2 days

Step 2 — Mobile App Completion

Focus:

- Seller listing flow
- My Listings
- Chat integration
- Notifications

Estimated: 3–5 days

Step 3 — AI Buyer Agent

Allow users to say:

"I want a black Mercedes S400 under 100,000 QAR"

The AI agent should:

- Search
- Compare
- Recommend
- Explain why it selected products

This is one of the biggest differentiators for SellSell.

Step 4 — Hot Demand Dashboard for Sellers

Show sellers:

- 50 people searching for Toyota Prado
- 30 people searching for iPhone 17

This creates a marketplace growth loop.

Step 5 — Final QA and Load Testing

- Performance testing
- Security testing
- Production stress testing
- Mobile testing

Recommendation

At this stage, I would focus next on:

Notifications → Mobile App → AI Buyer Agent

These three items will provide the biggest business impact and move the platform from a working marketplace to an AI-powered marketplace ready for commercial launch.
