Walkthrough — Explore Category Chips Duplication Fix

This document summarizes the changes made to resolve the category chip duplication on the Explore page, the testing performed, and the visual differences.

Changes Made

Frontend Category Processing Tweak

In

[src/app/(marketplace)/explore/page.tsx](file:///Users/shazej/Documents/askar/1705/pickpick-sls1/src/app/%28marketplace%29/explore/page.tsx#L284-L295):

- Modified the recursive `walk` function to accept an optional `isRoot` parameter (defaults to `true`).
- Updated the logic so that category items are only added to the visible `display` array when `isRoot` is true.
- Maintained the full recursive traversal to populate the `map` (slug-to-ID mappings), ensuring that filtering and searching on subcategories continue to work correctly under the hood.

Validation Results

We performed automated E2E tests using Playwright and ran TypeScript compiler checks to verify the fix:

1. **TypeScript Typecheck:**

- Command: `npm run typecheck`
- Result: `Passed` (No compile/type errors found).

2. **Category Chip Visibility Check:**

- **Expected Behavior:** Show only root categories (e.g. `Vehicles`, `Electronics`, `Property`, `Fashion`, `Furniture`, `Family Needs`, `Services`, `Jobs`, `Sport & Fitness`, `Travel & Trips`, `Mobile Numbers`, `Others`).
- **Expected Behavior:** Hide child subcategories (e.g. `Mobiles`, `Cameras & Video`, `Cleaning Services`, `Maintenance Services`, `Hobbies & Books`, `Pets`, `Job Seekers`, `Job Vacancies`).
- **Result:** `Passed` (All root categories were successfully matched, and child subcategories were verified as hidden).

3. **Filtering Functionality:**

- **Test Action:** Clicked on the `Vehicles` category chip.
- **Result:** `Passed` (Successfully applied filter, updating product listings list to match `Vehicles`).

4. ****Search Functionality.****

- ****Test Action:**** Searched for `"MacBook"` in the search input field.
- ****Result:**** `Passed` (Successfully executed search query, returning matching products like `"MacBook Pro 14\" M3 Pro 18GB/512GB"`).

Visual Comparison (Before and After)

The following side-by-side comparison demonstrates the visual enhancement on the Explore page:

````carousel

### Before the Fix (Flattened Tree displaying duplicates)

The category bar displays parent and child categories side-by-side in a flat list:

![Explore category chips before the

fix](/Users/shazej/.gemini/antigravity/brain/250aa209-335a-4e60-bd73-048acc6d5cc8/explore\_prod\_top.png)

<!-- slide -->

### After the Fix (Only Top-Level Root Categories displayed)

The category bar displays only top-level parent categories, completely eliminating the duplicates:

![Explore category chips after the

fix](/Users/shazej/.gemini/antigravity/brain/250aa209-335a-4e60-bd73-048acc6d5cc8/explore\_after\_fix.png)
