

sellsell marketplace updates:

SHAZ EJ

SellSell / PickPic

Executive Progress Update

Date: 18 June 2026

Executive Summary

SellSell has successfully completed the core AI marketplace foundation and has entered the final phase focused on growth, retention, and operational readiness.

The platform already supports AI-powered buyer search, AI-assisted seller listing creation, automated moderation, structured product extraction, semantic search, recommendation engines, and conversational marketplace interactions in Arabic and English.

Current estimated project completion is approximately 75%–80%.

The next major milestone is the Demand Capture Agent, which transforms unsuccessful searches into future sales opportunities by automatically notifying buyers when matching products become available.

Current Development Status

Area	Status
Marketplace Backend	Completed
PostgreSQL Database	Completed
Qdrant Vector Search	Completed
Redis Caching	Completed
Conversational AI Search	Completed
Arabic Search Support	Completed
Seller AI Listing Generation	Completed
Product Recommendation Engine	Completed

Area	Status
Moderation Agent	Completed
Structuring Agent	Completed
Indexing Agent	Completed
Buyer AI Assistant	Completed
Analytics Foundation	Partially Completed
Notification System	Partially Completed
Admin Dashboard	Partially Completed
Native iOS App	Partially Completed
Demand Capture Agent	Designed
Push Notifications	Not Started

Multi-Agent System Status

The marketplace currently operates using multiple specialized AI agents.

Moderation Agent

Purpose:

Reviews new listings and flags inappropriate or suspicious content.

Status:

Operational

Structuring Agent

Purpose:

Extracts product attributes from seller listings and organizes data into searchable formats.

Status:

Operational

Indexing Agent

Purpose:

Creates embeddings and indexes listings into Qdrant for semantic search.

Status:
Operational

Search Agent

Purpose:
Understands buyer intent and retrieves the most relevant marketplace listings.

Status:
Operational

Recommendation Agent

Purpose:
Generates personalized recommendations based on user behavior and search history.

Status:
Operational

Buyer Assistant Agent

Purpose:
Acts as an AI shopping assistant inside chat.

Status:
Operational

Seller Assistant Agent

Purpose:
Helps sellers generate listings, titles, descriptions, and pricing.

Status:
Operational

Notification Agent

Purpose:
Notifies users about marketplace activity and future matches.

Status:
Partially Complete

Demand Capture Agent

Purpose:
Captures unmet buyer demand and automatically reconnects buyers when matching products become available.

Status:

Designed and ready for implementation

What Is Already Working

AI Marketplace Search

Users can search naturally in Arabic or English.

Examples:

- Toyota Prado 2022
- شاليه في الخيران
- iPhone 15 Pro Max
- Mercedes S400 black

The AI understands intent and displays matching products directly inside the chat.

AI Seller Listing Creation

Sellers can:

- Upload images
- Provide simple descriptions
- Receive AI-generated titles
- Receive AI-generated descriptions
- Receive AI-generated product attributes
- Receive AI pricing assistance

Automated Listing Pipeline

Every listing passes through:

Seller Upload

Moderation Agent

Structuring Agent

Indexing Agent

Search Engine

Recommendations Engine

This entire workflow is operational.

Current Priority: Demand Capture Agent

Problem:

When a buyer searches for a product that does not exist, the system currently returns no results.

Example:

“I want a Toyota Prado 2024”

No matching listing exists.

Current Result:

No result found.

Desired Result:

The system asks:

“Would you like us to notify you when this product becomes available?”

If the user agrees:

- Demand is saved
- Buyer enters a waiting list
- System monitors future listings
- Buyer receives notification when a matching item is published

Business Impact:

- Prevents losing buyers
- Creates demand intelligence
- Improves retention
- Generates repeat visits
- Creates seller demand insights

Estimated Remaining Timeline

MVP Launch

Estimated Time:

1–2 Weeks

Remaining Tasks:

- Implement Demand Capture Agent
- Activate notification delivery
- Eliminate AI model cold-start delays
- Complete testing

Result:

Public beta launch readiness.

Production Ready Launch

Estimated Time:

3–6 Weeks

Remaining Tasks:

- Complete mobile seller experience
- Implement push notifications
- Complete admin moderation tools
- Load testing
- Monitoring and observability
- App Store preparation

Result:

Fully scalable marketplace platform.

Key Business Risks

Inventory Cold Start

Risk:

Buyers search for products that are not available.

Mitigation:

Demand Capture Agent.

AI Infrastructure Cost

Risk:

GPU costs increase as usage grows.

Mitigation:

Redis caching and optimized AI routing.

Content Quality

Risk:

Poor listings reduce trust.

Mitigation:

Automated moderation and quality scoring agents.

Strategic Recommendation

The project has successfully completed the most technically challenging phase.

The next phase should focus on:

1. Demand Capture Agent
2. Notification Delivery
3. Mobile Completion
4. Seller Growth Tools
5. Demand Analytics Dashboard

These features will convert the existing AI marketplace foundation into a scalable growth engine capable of increasing user retention and marketplace liquidity.

Overall Assessment

Project Completion:

75% – 80%
